

TEUWORLD.COM

INLAND CONTAINER

The application is intended to keep track of ISO containers.

The application can be used by container yards, depot, terminals, container operators, forwarding companies.

Containers: availability, inventory, visibility, arrival (Gate In), departure (Gate Out), truck and rail transportation, sale, purchase, repairs, rent, loaded, unloaded, customers, owners, customs, sea line, yards and so on. There is a complete history of all that has happened to the container.

The application significantly (at times) reduces the complexity of calculating the storage days of containers (including free days) at the yard. Client storage rates are used for laden and empty containers for different container sizes. Calculation of storage is carried out in automatic and semi-automatic mode.

Invoicing of services, control of their payment. Calculation of profits from the use of the container. Control of receipt of funds from customers. Any documents can be stored along with the application: scans, files, pictures that are associated with a given counterparty.

Container
Arrival (Gate In),
Departure (Gate Out).

Purchase, sale, rent,
repairs, truck and rail
transportation.

Automatic calculation
of container storage
with client storage
rates.

Revenues, expenses,
profit calculation,
financial analysis.

Invoicing of services,
control of their
payment.
